DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

3. Claims 1-9 and 21-29 are rejected under 35 U.S.C. 103(a) as being unpatentable over Umeda et al. 5,449,710, in view of Rosenquist et al. 6,353,046 or Mark et al. 4,130,530, further in view of Ogoe et al. 5,663,280 or Ogoe 5,041,479.

4. Umeda et al. disclose polycarbonate, alkali metal salt of perfluoroalkanesulfonic acid and organopolysiloxane in the Abstract, list the metal salts from column 6, line 50, to column 7, line 6 and show cyclic polysiloxane in column 7, lines 7-20. Rosenquist et al. teach polycarbonate, perfluoroalkane sulfonate and octaphenylcyclotetrasiloxane in the Abstract, potassium diphenylsulfone sulfonate in column 1, lines 35-36. For

concentrations see claim 2. Mark et al. recite polycarbonate and cyclic siloxanes in claims 1-6. Ogoe et al. reveal masterbatching alkali metal salts of perfluoroalkanesulfonic acid in Examples 20-27. Ogoe displays masterbatching polycarbonate and additives in the Abstract and from column 1, line 53, to column 2, line 17. It would have been obvious to one having ordinary skill in the art; at the time the invention was made, to use the siloxanes of the secondary references in the composition of Umeda et al. in order to reduce the melt viscosity and to masterbatch the resulting compositions for better dispersion of the flame retardant salts.

Allowable Subject Matter
